

HEADSET CHIP

The **HEADSET CHIP** has been specially developed for the harmonization of electrosmog in headsets. Thanks to its excellent characteristics as an information carrier, the chip made of pressed carbon achieves an impressive effectiveness despite its minimal size. It is precisely this minimal size that enables the use with very small devices and Bluetooth headsets.

If the headset is connected to a mobile device (e.g. smartphone or notebook), this should be additionally harmonized in any case.

For very small devices, we recommend wearing an OMNIUM pendant instead of the HEADSET CHIP.

Application:

Clean the desired device well with alcohol on the affected area. If the surface is very smooth, roughen the area slightly with a fine sandpaper if necessary. Stick on HEADSET CHIP.

TECHNICAL DETAILS

Material: Pressed carbon /
Zirconia (diamond imitation)

Size: Ø 12 mm
